

GRANITE ENTERPRISE MOBILITY

# Mobile Security & Compliance Solution Overview

## Customer Challenge

Employees are highly mobile and use their mobile devices to access company information on non-company managed networks. When connected to cellular, residential or public Wi-Fi, mobile devices are no longer protected, and security threats, such as mobile phishing, malware infection, and data leakage, are emerging through multiple mechanisms and apps, such as email, SMS, WhatsApp, and Facebook Messenger.

## Mobile Security & Compliance Solution

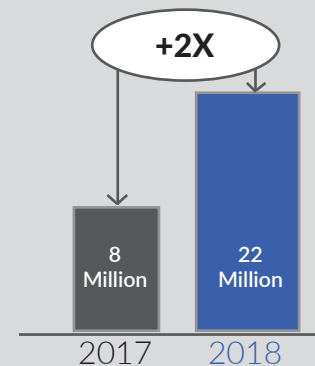

Granite provides the best available protection against mobile threats by detecting and blocking any device attempting to connect to phishing sites, malicious hosts, unofficial app stores or CnC servers. The solution detects and prevents attacks at the network level and pro-actively scans for vulnerabilities at the device level. It can be configured to enforce your organization's policies by blocking access to content deemed inappropriate in a work environment.

## Key Benefits

- Protects employees from security threats while on Wi-Fi and cellular data
- Simple setup process that takes minutes per user/device
- Provides control of app and web-browser Internet traffic
- Detailed reporting of user data for company and individuals
- Separate policies can be configured for different groups of employees
- Access to certain business websites/apps even after data cap is reached

### Mobile malware attacks campaigns

Mobile malware campaigns increased by nearly 2X between 2016 and 2017, from 8 million attacks to 22 million per day<sup>(1)</sup>
