CUSTOMER CHALLENGE

To keep your organization running at optimal capacity and speed, you must consistently evaluate and deploy new technologies. Several aspects must be considered, such as volume, velocity, efficiency, and logistics.

Granite can take the logistical burden off your shoulders with our Fulfillment Center service by receiving, inventorying, configuring, kitting, storing, and ultimately shipping devices onsite for technicians to install.

KEY BENEFITS

- Vast array of 15K technicians coast to coast and can be onsite for installation support at several sites in a day, week, or month.
- Granite is a recognized leader in helping geographically dispersed organizations with all aspects of technology deployments, thus shorten the deployment phase and freeing up your IT resources from other critical projects.
- Granite handles the asset lifecycle management by keeping a certain percentage of necessary hardware in stock for new sites or next-day replacement.
- Have visibility into the inventory system that we manage your assets, so you know when you need to order more supplies.
